

# Appending UTM Globally

**1. Click UTM, check the "Append UTM" box in the HandL Options tab and save changes**

**NOTE:** This may not work for some of the themes that are not using native `wp_content` filter. Or may not work for some of the Content builder plugin. If this method does not work, you can always append UTMs individually to your links and buttons using class variables `utm-out`. Please see [Appending UTMs to the buttons using class name attributes for more.](#)
