

# I'm using CloudFlare (CF)

Make sure the caching level is set as "Standard" shown in the image below

<b>Caching Level</b> Determine how much of your website's static content you want Cloudflare to cache. Increased caching can speed up page load time.  This setting was last changed a few seconds ago	<input type="radio"/> No query string <input type="radio"/> Ignore query string <input checked="" type="radio"/> Standard
<a href="#">API</a> ▶ <a href="#">Help</a> ▼	
<b>What are Cloudflare's <a href="#">Caching Levels</a>?</b> You can set Cloudflare's CDN to cache <a href="#">static content</a> according to these levels: <ul style="list-style-type: none"><li>• <b>No Query String:</b> Only delivers files from cache when there is no query string.</li><li>• <b>Ignore Query String:</b> Delivers the same resource to everyone independent of the query string.</li><li>• <b>Standard:</b> Delivers a different resource each time the query string changes.</li></ul> We recommend using the Standard level. <a href="#">Learn more</a>  <b>Note:</b> By default, Cloudflare does not cache HTML content. You can create a Page Rule to <a href="#">cache static HTML content</a> .  <b>Additional Resources</b> <a href="#">Understand Cloudflare Caching Level</a>
