

I've NitroPack plugin

1) Ignored parameters

Make sure "Include the default ignored parameters" is disabled.

The screenshot shows the 'Ignored Parameters' settings panel in the NitroPack plugin. At the top right is a toggle switch that is turned on. Below the title, there is a text area for specifying URL parameters to ignore, with examples 'gclid*' and 'utm_*'. At the bottom, there is a dropdown menu for 'Include the default ignored parameters' which is currently set to 'Disabled'. A link 'here' is provided for more information.

Ignored Parameters

Specify a list of URL parameters that do not modify the page content and can be ignored.

Specify excluded URL parameters, one at a line. You can use wildcard *. By default NitroPack ignores the Urchin tracking parameters (utm_*).

Example 1: gclid*

Example 2: utm_*

Include the default ignored parameters

Disabled

You can find the complete list of parameters that this option adds [here](#).

~~2) Excluded Cookies (Now Obsolete, see Variation Cookies below instead)~~

Add the following cookies and all the custom parameters you created in "Excluded Cookies" section.

COOKIES

```
utm_campaign, utm_source, utm_term, utm_medium, utm_content, gclid, first_utm_campaign,
first_utm_source, first_utm_term, first_utm_medium, first_utm_content, handl_original_ref,
handl_landing_page, handl_ip, handl_ref, handl_url, organic_source, gaclientid//and all the
custom parameters created by you
```

2) Variation Cookies

With Excluded ones (the method above), NitroPack wouldn't generate any cache for the pages containing your cookies.

While with Variation cookie, a new optimization would be created based on the different cookie values.

Image not found or type unknown

Still having problems? Let us know, clicking the chat bubble at the bottom right of the page.
