

Track and capture fbclid, _fbc and _fbp

Add fbclid, _fbc and _fbp as custom parameters under UTM menu

| HandL Options | Custom Fields | Gravity Forms | Predefined Variables | WooCommerce Postback |
|----------------|-------------------------------------|---------------|----------------------|----------------------|
| Custom Param 1 | <input type="text" value="_fbp"/> | | | |
| Custom Param 2 | <input type="text" value="_fbc"/> | | | |
| Custom Param 3 | <input type="text" value="fbclid"/> | | | |

ad they will be tracked and captured just like any other UTM parameters. So easy... :)
