

# Track UTMs in Divi Contact Form

## Add the input fields to your form

You can add as many fields as you like to your form and track them all. Here we only illustrate for `utm_campaign`. Check here for the list of parameters you can track [Native WP Shortcodes](#).

Make sure the `Field ID` exactly matches with your parameter name

the final step is to make sure that the required field under field options is set to no

## Field Options

Type

Input Field

Minimum Length

0

Maximum Length

0

Allowed Symbols

All

Required Field

NO

## Hide the fields

Unfortunately, divi does not allow adding `hidden` elements to your form. But no worries, we can hide it using Divi. Simply add the following CSS rule under `Main Element`

```
display: none;
```

## Field Settings

Preset: Default ▾

### Custom CSS

Before

Main Element

```
1 display: none;
```

After

Visibility

Transitions

# And that's it

You are ready to collect the data. Rest is handled by HandL UTM Grabber :)

Proof that you are collecting the data from your form...

You can run the following JS line (in developer console) to print the content of your form without actually submitting the form.

```
jQuery('form').serializeArray()
```
