

# Form Titan Integration

HandL UTM Grabber / Tracker Form Titan Integration step by step

- [Iframe integration](#)

# Iframe integration

HandL UTM Grabber integrates with Form Titan with only couple of clicks.

First of all, make sure you added all the utm values as utm\_campaign, utm\_source, utm\_medium, utm\_term, utm\_content as static variables like the shown below:

Make sure the names exactl matches with our naming convention shown here [Native WP Shortcodes](#)

Add custom variables which you can set from Salesforce or use static values.

All

1

utm\_source

Default Value

2

utm\_campaign

Default Value

3

utm\_term

Default Value

4

utm\_content

Default Value

5

utm\_medium

Default Value

6

traffic\_source

Default Value

7

organic\_source\_str

Default Value

8

submission\_id

Default Value

After that Publish your change and grab the iframe code and paste it into your post:

If you are implementing using the iframe code, your code will look like this.

```
<iframe onload="window.parent.scrollTo(0,0)" id="ft1302219221332-952-94"
allowtransparency="true" src="https://domain.formtitan.com/formname" frameborder="0"
width="1000" height="700" scrolling="no"></iframe>
```

Simply modify it to

```
<iframe onload="window.parent.scrollTo(0,0)" class="utm-src" id="ft1302219221332-952-94"
allowtransparency="true" src="https://domain.formtitan.com/formname" frameborder="0"
width="1000" height="700" scrolling="no"></iframe>
```

As you can see, we just added `class="utm-src"` to the iframe. Rest everything will work and your UTM fields will be auto populated.

After submission is completed: you will be able to use these System fields anywhere in your automation.

In submissions like this
