

Capture UTMs using Formstack forms

This form only works in HandL UTM Grabber V3

Add the hidden fields as follows. Make sure the hidden field name (either field label or placeholder exactly matches with our naming convention here [Native WP Shortcodes](#))

The screenshot shows the Formstack form builder interface. The form is titled "Sign up for our newsletter!" and includes a description: "Fill out your information below to be signed up for our informative newsletter." The form contains several input fields:

- Name**: A single-line text input.
- Email**: A single-line text input.
- Hidden utm_campaign**: A hidden text input with the label "utm_campaign" and placeholder "utm_campaign".
- Hidden utm_source**: A hidden text input with the label "utm_source" and placeholder "utm_source".
- Hidden utm_medium**: A hidden text input with the label "utm_medium" and placeholder "utm_medium".
- Hidden organic_source_str**: A hidden text input with the label "organic_source_str" and placeholder "organic_source_str".

The left sidebar shows the "Logic" section with "General" and "Field-Specific" tabs. The "General" tab is active, showing options for "FIELD LABEL", "SUPPORTING TEXT", "PLACEHOLDER", and "Use Callout". The "Field-Specific" tab is also visible, showing options for "Create Custom List" and "Link to Smart List". The "Autocomplete Editor" is also visible.

After activating the plugin, insert the following code in your custom javascript file:

```
function FF_OnAfterRender(){
  console.log("Form rendered successfully!");
  var vars =
    ["Lead.UTM_Campaign__c","Lead.UTM_Medium__c","Lead.UTM_Source__c","Lead.UTM_Term__c","Lead.UTM_
  for (v of vars){
    escape_v = v.replace(/\.\/g, '\\.\\.')
    jQuery("#"+escape_v).val(Cookies.get(v));
  }
```

```
    return true;
}
```

And the fields will be automatically populated after lead is submitted.
