

Capture UTMs using Formstack forms

This form only works in HandL UTM Grabber V3

Add the hidden fields as follows. Make sure the hidden field name (either field label or placeholder exactly matches with our naming convention here [Native WP Shortcodes](#))

The screenshot displays the Formstack Builder interface for a form titled "Sign up for our newsletter!". The form is configured with the following elements:

- Title:** Sign up for our newsletter!
- Supporting Text:** Fill out your information below to be signed up for our informative newsletter.
- Fields:**
 - Name:** A text input field.
 - Email:** A text input field.
 - Hidden Fields:**
 - utm_campaign:** A hidden text input field.
 - utm_source:** A hidden text input field.
 - utm_medium:** A hidden text input field.
 - organic_source_str:** A hidden text input field.

The left sidebar shows the "Logic" tab with "General" and "Field-Specific" settings. The "Field-Specific" tab is active, showing "Link to Smart List" and "Autocomplete Editor" options. The top navigation bar includes "Forms", "Uncategorized", "handl", "Build", "Conversion Kit", "Settings", "Share", "Submissions", and "Analytics".

After activating the plugin, insert the following code in your custom javascript file:

```
function FF_OnAfterRender(){
  console.log("Form rendered successfully!");
  var vars =
    ["Lead.UTM_Campaign__c","Lead.UTM_Medium__c","Lead.UTM_Source__c","Lead.UTM_Term__c","Lead.UTM_
  for (v of vars){
    escape_v = v.replace(/\.\/g, '\\.\\.')
    jQuery("#"+escape_v).val(Cookies.get(v));
  }
```

```
    return true;
}
```

And the fields will be automatically populated after lead is submitted.
