Track UTMs in Hubspot Form

Add UTM fields to your form

This is assuming you already created Contact properties (ideally under Web Analytics) and make sure you name them after HandL UTM Grabber properties (such as `utm_campaign`, `utm_source`, `gclid`, `fbclid` etc). See the full list here [Native WP Shortcodes](#)

Make sure the fields are hidden

The screenshot displays the HubSpot Form Editor interface. At the top, there's a dark header bar with a 'Back to all forms' link, a 'Demo' tab, a status indicator 'Auto-saved with unpublished changes', and an 'Update' button. Below the header, a navigation bar shows tabs for 'Form', 'Follow-up', 'Options', and 'Style & preview'. The 'Form' tab is active, showing a left sidebar with a 'Done' button and an 'Edit contact property' link. The main area is titled 'Edit utm_campaign' and shows the configuration for a contact property named 'utm_campaign'. The 'Field Type' is set to 'Single-line text'. There are two tabs: 'Basic' (selected) and 'Logic'. Under the 'Basic' tab, there are options to 'Make this field required' (unchecked) and 'Make this field hidden' (checked). The 'Label' field is set to 'UTM Campaign'. The 'Help Text' field is empty. The 'Placeholder text' field is empty. The 'Default value' field is empty. On the right, the form preview shows three input fields: 'First Name * firstname' (Contact Property), 'Last Name * lastname' (Contact Property), and 'Email * email' (Contact Property). Below these is the 'UTM Campaign utm_campaign' field, which is marked as a 'Contact Property' and a 'Hidden Field'. A 'Submit' button is at the bottom of the preview area.

Copy paste the form embed code

Clicking the share button will generate the embed code looks like this

Share your form

Embed code

Share link

To embed this form, simply copy and paste the code below into the HTML code on your website. [Learn more](#) 

```
<!--[if lte IE 8]>
<script charset="utf-8" type="text/javascript"
src="//js.hsforms.net/forms/v2-legacy.js">
</script>
<![endif]-->
<script charset="utf-8" type="text/javascript"
src="//js.hsforms.net/forms/v2.js"></script>
```

Copy

Add the following modifications Simply add the `onFormReady` event as is

```
<!--[if lte IE 8]><script charset="utf-8" type="text/javascript"
src="//js.hsforms.net/forms/v2-legacy.js"></script>
<![endif]--><script charset="utf-8" type="text/javascript"
src="//js.hsforms.net/forms/v2.js"></script>
<script>
  hbspt.forms.create({
    region: "na1",
    portalId: "{portal_id}",
    formId: "{form_id}",
    onFormReady: function(f){
```

```

f.serializeArray().map(x=>{
  let cookie_val = Cookies.get(x.name)
  if (cookie_val && cookie_val != ''){
    f.find('input[name="'+x.name+'"]').val(cookie_val).change();
  }
})
});
</script>

```

That's it! Your form will track the parameters and you'll get all the tracked parameters under submissions in Hubspot (in contact property for the contact)
