Track UTMs in Hubspot Form

Add UTM fields to your form

This is assuming you already created Contact properties (ideally under Web Analytics) and make sure you name them after HandL UTM Grabber properties (such as `utm_campaign`, `utm_source`, `gclid`, `fbclid` etc). See the full list here [Native WP Shortcodes](#)

Make sure the fields are hidden

The screenshot displays the HubSpot Form Editor interface. At the top, there's a dark header with a 'Back to all forms' link, a 'Demo' tab, and a status indicator 'Auto-saved with unpublished changes' along with an 'Update' button. Below the header, a navigation bar includes 'Learn more', 'Form' (selected), 'Follow-up', 'Options', 'Style & preview', 'Share', and 'Actions'. The main editor area is split into two panels. The left panel, titled 'Edit utm_campaign', shows the configuration for a contact property named 'utm_campaign'. It includes tabs for 'Basic' and 'Logic'. Under 'Basic', there are checkboxes for 'Make this field required' (unchecked) and 'Make this field hidden' (checked). The 'Label' section shows 'UTM Campaign' with rich text formatting options. The 'Help Text' and 'Placeholder text' sections are empty. The 'Default value' section is also empty. The right panel shows a preview of the form. It contains three input fields: 'First Name * firstname' (labeled 'Contact Property'), 'Last Name * lastname' (labeled 'Contact Property'), and 'Email * email' (labeled 'Contact Property'). Below these is a 'UTM Campaign utm_campaign' field, which is labeled 'Contact Property' and 'Hidden Field'. A 'Submit' button is at the bottom of the preview area.

Copy paste the form embed code

Clicking the share button will generate the embed code looks like this

Share your form

Embed code

Share link

To embed this form, simply copy and paste the code below into the HTML code on your website. [Learn more](#) 

```
<!--[if lte IE 8]>
<script charset="utf-8" type="text/javascript"
src="//js.hsforms.net/forms/v2-legacy.js">
</script>
<![endif]-->
<script charset="utf-8" type="text/javascript"
src="//js.hsforms.net/forms/v2.js"></script>
```

Copy

Add the following modifications Simply add the `onFormReady` event as is

```
<!--[if lte IE 8]><script charset="utf-8" type="text/javascript"
src="//js.hsforms.net/forms/v2-legacy.js"></script>
<![endif]--><script charset="utf-8" type="text/javascript"
src="//js.hsforms.net/forms/v2.js"></script>
<script>
  hbspt.forms.create({
    region: "na1",
    portalId: "{portal_id}",
    formId: "{form_id}",
    onFormReady: function(f){
```

```

f.serializeArray().map(x=>{
  let cookie_val = Cookies.get(x.name)
  if (cookie_val && cookie_val != ''){
    f.find('input[name="'+x.name+'"]').val(cookie_val).change();
  }
})
});
</script>

```

That's it! Your form will track the parameters and you'll get all the tracked parameters under submissions in Hubspot (in contact property for the contact)
