

# Mailgen Form Embed Integration

## Create the subscribe (opt-in) form on Mailgen

Select `form fields` and enter the custom parameters you'd like to track. You can find the list of parameters you can track here [Native WP Shortcodes](#).

The screenshot shows the Mailgen 'Optin Form' settings interface. The 'Custom Fields' modal is open, displaying a table of fields to be included in the sign-up form. The table has columns for 'Displayed' and 'Required'. The fields listed are Email Address, First Name, Last Name, utm\_campaign, and utm\_source. The 'Email Address' field is checked for both 'Displayed' and 'Required'. The 'First Name' and 'Last Name' fields are checked for 'Displayed'. The 'utm\_campaign' and 'utm\_source' fields are not checked for either. There are 'Save Changes' and 'Cancel' buttons at the top left of the modal, and an 'Add New Field' button at the top right.

	Displayed	Required	
Email Address	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	
First Name	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
Last Name	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
utm_campaign	<input type="checkbox"/>	<input type="checkbox"/>	
utm_source	<input type="checkbox"/>	<input type="checkbox"/>	

## Copy HTML embed code and paste it into a text file or documents

Because we'll edit the custom fields (see the next section)

Copy/Paste code to your site

```
<!-- Begin Signup Form -->
<script type="text/javascript">
  if (typeof jQuery == 'undefined') {
    document.write('<scr' + 'ipt type="text/javascript" src="https://list.mailigen.com/js/jquery.js"></scr' + 'ipt>');
  }
</script>
<script language="javascript" type="text/javascript" src="https://list.mailigen.com/js/optin.js"></script>
```

Optin Form

Email Address \*

First Name

## Wrap around each custom fields using our wrappers

### For example:

Replace

```
<div class="c2">
<input type="text" class="text" name="merge[3]" accept="text" value="">
</div>
```

To

```
<div class="c2"><[utm_campaign_i]<input type="text" class="text" name="merge[3]" accept="text"
value="%s" class="utm_campaign">[/utm_campaign_i]
</div>
```

See the list of wrappers for each custom parameters you created here [INPUT FIELD WRAPPER](#).

If you integrated correctly, you are ready to collect UTMs
