

Nex Forms Integration

HandL UTM Grabber / Tracker integration within Nex Forms

- [Nex Forms Implementation](#)

Nex Forms Implementation

HandL UTM Grabber works with Nex Forms with very easy setup.

Create the hidden fields as shown in the image and make sure the **Input Names** are matching the HandL UTM Grabber's parameter name. See the full list of the parameters you can use [here](#).

The screenshot displays the Nex Forms editor interface. On the left is a dark sidebar with navigation links: Dashboard, Posts, Media, Pages, Comments, NEX-Forms (active), Appearance, Plugins, Users, Tools, Settings, UTM, and Collapse menu. The main workspace shows a form design with a text input field labeled '*Email' and a hidden input field below it. The top toolbar includes tabs for FORM, EMAIL SETUP, INTEGRATION, OPTIONS, EMBED, and Test Form 1. The right sidebar is the 'Edit Field' panel, currently showing the 'INPUT' tab. The 'Input Name' field is highlighted with a red box and contains the text 'utm_campaign'. Other fields in the panel include 'Input Placeholder', 'Input ID', 'Default value & Input Styling', 'Input Size', 'Corners', 'Disabled', 'Set icon before', 'Set icon after', and 'BACKGROUND SETTINGS'.
